## A complete sandboxed environment to install Opera addons in Chrome.

[Download for Chrome](#)

[Download for Opera](#)

With focus on performance, privacy and security, CrossPilot is an advanced tool that makes it easy for you to install Opera webstore addons in Chrome and vice versa.

- 

### **Cross browser installation**

Easily install Opera webstore addons in Chrome browser or vice versa. Most of the addons are compatible and we are always working to add compatibility for more addons.

- 

### **Sandboxed environment**

Installed addon runs in a sandboxed environment and does not have direct access to browser APIs and can only access data that CrossPilot allows it to. Your personal data will always stay safe and secure.

- 

### **Lightning fast performance**

CrossPilot is written in TypeScript with performance and speed being the most importance factors. You won't notice any issues regarding the performance of addons installed via CrossPilot.

- 

## **Standard API support**

CrossPilot supports most commonly used browser APIs so most addons will be compatible. We plan to release updates with support for more APIs in future. Please refer to our [API documentation](#) for details.

- 

### **Permissions control (coming soon)**

An extension permissions control system allows users to grant and deny permissions to installed add-on. We are working on this feature and it will be released soon.

- 

## **Automatic updates**

CrossPilot supports automatic updates for Opera and Chrome addons. Updates are checked automatically in the background and there is a manual update check option in CrossPilot options page.

## **What's new in v1.1.1**

- **Added Show welcome page on installation**

Open a welcome page on installation that shows some featured addons

- **Added Show addon name when asking for optional permissions**

Addon name is displayed when optional permissions dialog is shown to the user

- **Fixed Addon not loading if no icons specified**

Fixed a major bug that caused CrossPilot to not load installed addon if there are no icons specified in addon's manifest file

## **v1.1.0**

- **Added Permissions request before installation**

CrossPilot by itself does not need many permissions to run, we have moved permissions that will be used by installed extensions to optional permissions and user will be able to grant or deny permissions when installing an extension.

- **Added Incompatible permissions overview**

CrossPilot will display a list of all unsupported permissions that an extension requires and will not proceed with installation process.

## **v1.0.1**

- **Fixed Auto update check on startup**

Fixed a bug where CrossPilot was not checking for extension updates on startup

- **Fixed Reset popup icon on extension uninstall**

CrossPilot got stuck with last uninstalled extension icon

## **v1.0.0**

- **Added Chrome Extension APIs Support**

We have added support for most commonly used Chrome APIs including i18n, storage, tabs and downloads.

- **Added XMLHttpRequest Support**

CrossPilot translates your addon's XMLHttpRequests using a custom polyfill so you don't have to make any changes to make your addon compatible.

- **Added Local Storage API Support**

CrossPilot provides a polyfill for Local Storage API that syncs local storage used by your addon with Chrome's storage.

## Popular Extensions

- [Direct links out](#)

Removes all [ You are leaving our site ] and redirection stuff from links.

- [Vimeo AutoPlay](#)

Make Vimeo videos automatically play. When opening a video in a background tab, it only begins playing when you switch to that tab.

- [DarkCloud](#)

Makes soundcloud.com darker, so it's easier on the eyes.

- [InstaSaver](#)

With InstaSaver you can download images & videos from Instagram using the download button in the upper right corner of every image & video.

- [SoundCloud MP3 Downloader](#)

SoundCloud Downloader adds a download button beneath each SoundCloud track in the controls section to provide you direct MP3 links of tracks.

- [The Switcher](#)

'Sublime Text'-like switching between tabs. Just press CTRL+M (Opera 17+) or click on the extension icon and start typing.

- [Autoplay No More](#)

Disable automatic jumps from current to next video on Youtube, TED and Vimeo.
